There are many good doctors but only a few that are great. SenaCare will help you in finding the best health care possible.

(<http://www.senacare.com/>) When seeking medical treatment, what is the most important factor? Top quality physician care provided by doctors with developed expertise for a specific treatment area? Utilization of the most advanced modern healthcare technologies in treatment delivery? Access to healthcare services 24/7? At SenaCare, our group of American Board Certified multilingual physicians work to ensure that patients from all over the world receive top notch individualized care, incorporating the use of state-of-the art medical technologies.

In 2004, Dr. Wehbe founded SenaCare on the philosophy of healthy living. SenaCare is an integrated healthcare company, offering a range of modern medical services and products to the international patient population. Our operations are divided into three primary lines – travel health (medical tourism) to the US, telemedicine products, and telemedicine consultation – that work in unison to improve global access to quality healthcare and advanced medical technologies. Currently, SenaCare has established discounted rate contracts with many of the top 10 US hospitals, fostering international patient access to the best and most comprehensive healthcare options via SenaCare's US inbound health travel services. Outside the US, SenaCare conducts telemedicine in West Africa and has physician representation in many countries. In 2011, SenaCare is planning to enter into at least five new international markets, with a high focus on Dubai, the UAE, and the MENA/GCC region.

Although SenaCare's services and technologies are cutting edge, the company's core is rooted in the principles governing traditional standard care. SenaCare uses telemedicine to provide pre and post consultations to international patients travelling to the United States for medical treatment. Additionally, telemedicine enables SenaCare's physicians to remotely care for the elderly, monitor pregnancy development, and offer international patients around the clock care. SenaCare's functionality as a telemedical designer, vendor, and service provider truly demonstrates the company's acute understanding of the global telemedical landscape and its ability to translate the utility of telemedicine into the employment of SenaCare's proprietary telemedical equipment line and healthcare services. Furthermore, SenaCare's in-house operations result in very affordable healthcare, a

dynamic which certainly differentiates SenaCare from the competition.

During Arab Health 2011, SenaCare will launch its Telecare Portable Unit with many adaptable remote care service options and features. SenaCare will be taking customized orders and offering special pricing on its novel Telecare Portable Unit during the Arab Health exhibition (Jan 24-27th). Additionally, SenaCare will be meeting with healthcare providers and organizations, telemedicine vendors, and destination management companies representing the Middle East in order to develop business relations and potential partnerships.

SenaCare will be located in the US Pavillion at booth 2A39.
